

Optional Peripheral Equipment

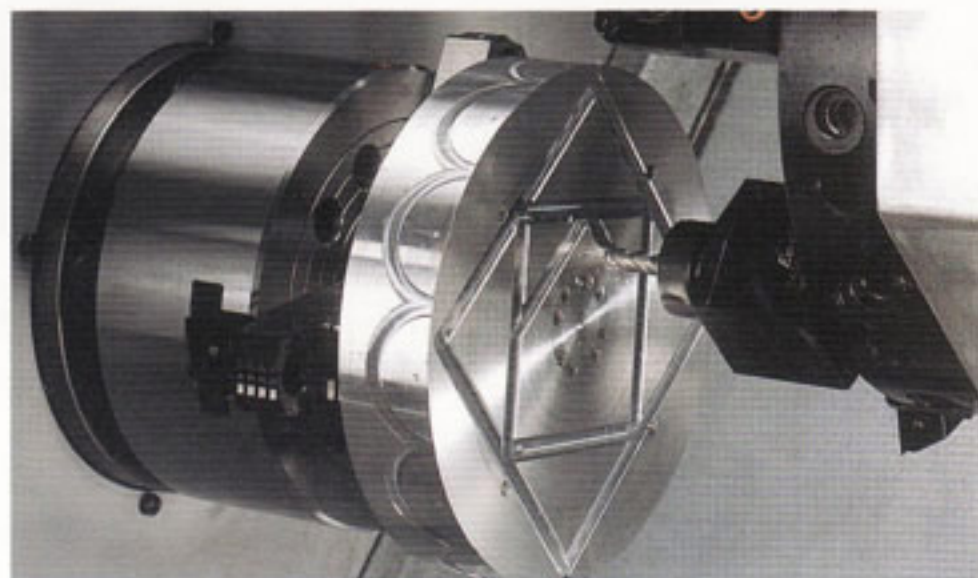

VDI Power turret

- VDI or new design high rigid dodecagonal drum power turret combined with C-axis multi-positional index control for drilling and tapping, can handle both radial and axial profile milling to meet the demands of DONE-IN-ONE processing.

Dodecagonal drum power turret

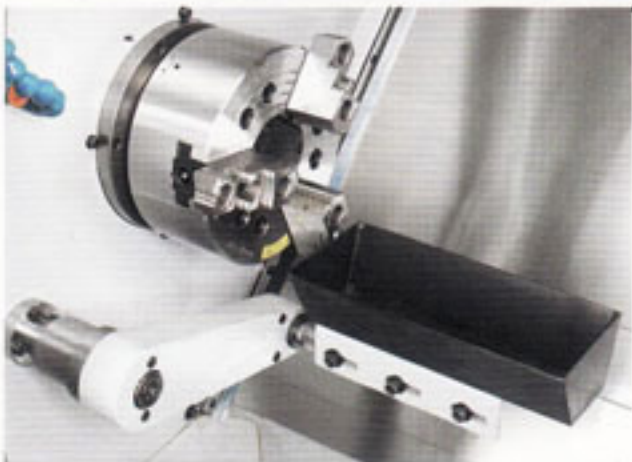

Tool setter

- Sets tools automatically or manually, with tool wear data registered and compensated in controller to repeatable accuracy of $5\ \mu\text{m}$, which can reduce downtime for inspection and upgrade cutting precision.

Parts catcher

- Automatically collects finished work piece and conveys them to outside collection box without opening the door. It also works well with a bar feeder to save time on each turning cycle.

Steady rest

- An essential device supports and secures long shaft workpiece to keep concentricity and accuracy during machining. Body travel can be either programmable or manual.
